

Immanuel Morris

Software Engineer | AI Developer

(951) 217-6237 | immanuel_morris@yahoo.com | [GitHub](#) | [LinkedIn](#)

PROFESSIONAL SUMMARY

Software engineer and AI developer with a B.S. in Computer Science (CSUSB, May 2026) and a decade of technical leadership experience across automation engineering, conversational AI, and full-stack development. Proven track record designing and deploying production AI systems including virtual assistants, conversational interfaces, and LLM-powered workflows. Experienced integrating Claude, Gemini, and Deepgram into scalable automation solutions that reduce manual work and drive operational efficiency. Uniquely positioned to bridge technical and non-technical stakeholders at every level.

TECHNICAL SKILLS

Languages: Python, JavaScript, C#, C++, Java, SQL, R, TCL, HTML/CSS, Verilog

Frameworks: ASP.NET Core, React, Next.js, Node.js, Entity Framework Core

AI/ML: Claude, Gemini, LLaMA 3, Ollama, Deepgram STT/TTS, Stable Diffusion, ComfyUI, Machine Learning Pipelines, Prompt Engineering

Infrastructure: Docker, Linux/Unix, Network Architecture, Server Configuration, Vercel, Git

Tools: VS Code, Claude Code, Jira, Agile/Scrum, Autodesk Fusion 360, Isaac Lab

Databases: SQL Server, SSMS, Database Design, RESTful APIs

PROFESSIONAL EXPERIENCE

AI Developer | *CCC AI Entrepreneurship Statewide Initiative* | *Workforce Innovation Labs* | *Remote* June 2026 – Present

- Serving as **AI Developer** on a California Community Colleges statewide initiative spanning three platforms: Makerspace AI Assistant, Innovation Marketplace, and Theuth Writing Assistant all while under the direction of a Chancellor's Office AI Fellow.
- Designed and deployed a production conversational AI assistant using Next.js, Deepgram STT/TTS, Google Gemini 2.5 Flash, and Vercel, replacing a manual static help process with an intelligent, automated voice interface for community college students.
- Contributing to platform architecture decisions, database design proposals, active development, and technical documentation as the initiative moves into statewide testing and AI Future Summit launch.

STEM Activities Coordinator | *Moreno Valley College Makerspace* | *Moreno Valley, CA* July 2022 – June 2026

- Supervised and directed student employee teams through multi-phase technical projects, Berkeley Humanoid Lite robotics deployment, AI infrastructure builds, and concurrent STEM initiatives. Also managed timelines, priorities, and deliverables across all workstreams.
- Architected and deployed a self-hosted generative AI platform integrating LLMs (LLaMA 3, DeepSeek, Mistral via Ollama) and Stable Diffusion within containerized **Docker** infrastructure with role-based access controls, persistent storage, and network-wide availability for 25+ staff.
- Configured and maintained dedicated Ubuntu **Linux** servers for robotics programming, simulation pipelines, and AI deployment environments, managing hardware setup, system updates, and network access.
- Supported the NASA ExoLab ISS space experiment, configuring equipment, establishing data collection protocols, and managing real-time system monitoring for the International Space Station research initiative.
- Developed and delivered technical training programs for staff and faculty on AI tools, Python, Java, and system design, building institutional knowledge and reducing dependency on external support.
- Evaluated and implemented emerging technologies including **ComfyUI**, voice AI agents, and multi-modal AI platforms; documented workflows for institutional adoption and presented findings at regional conferences alongside a Chancellor's Office AI Fellow.

Lead VFX Supervisor | *Exceptional Minds Studio* | *Sherman Oaks, CA* June 2014 – March 2020

- Directed technical teams of 15+ engineers and artists through complex software production pipelines for major studio releases including Avengers: Endgame, Black Panther, and Star Wars: Rise of Skywalker.
- Architected and built custom pipeline automation tools in **Python** and TCL, reducing manual processing time by 75% and enabling significant throughput gains without scaling headcount.

- Managed multi-million-dollar technical projects with strict delivery deadlines, coordinating between internal teams, external vendors, and client studios including ILM, Sony, and Fox.
- Designed and implemented cross-platform delivery systems supporting multiple render farm architectures, overseeing system integration, quality control, and post-deployment reliability.
- Mentored junior staff through technical onboarding and ongoing development; successfully delivered 500+ complex technical implementations on schedule and within budget.

SELECTED PROJECTS

Makerspace AI Voice Assistant - *Next.js, Deepgram STT/TTS, Google Gemini 2.5 Flash, Vercel*

- Designed and deployed a production voice AI assistant for MVC Makerspace, fully conversational interface guiding students through equipment use and troubleshooting in real time. Built end-to-end: React frontend, serverless API routes, persistent conversation memory, custom system prompt. Live at makerspace-voice-assistant.vercel.app.

Hotel Management System - *ASP.NET Core, React, C#, SQL Server, Entity Framework Core, Swagger API*

- Architected production-grade 3-tier enterprise application with full CRUD operations, normalized database schema with referential integrity, RESTful API design, and interactive React frontend. Delivered independently; earned 100/100.

Containerized Multi-Modal AI Infrastructure - *Docker, Python, Linux, Ollama, Stable Diffusion, LLaMA 3*

- Architected self-hosted AI platform deployed across MVC Makerspace network, LLMs and image generation in containerized **Docker** infrastructure with role-based access, persistent storage, and load-balanced network-wide availability.

Berkeley Humanoid Lite: Open-Source Robotics Deployment - *Ubuntu/Linux, Python, Isaac Lab, Autodesk Fusion 360*

- Led student team through full hardware assembly, component fabrication via Bambu 3D printing, Ubuntu Linux deployment pipeline, and **Isaac Lab** reinforcement learning simulation environment.

EDUCATION

Bachelor of Science, Computer Science	May 2026
California State University, San Bernardino – GPA:3.54 Dean's List, Spring 2026	
A.S. Computer Science A.S. Mathematics A.S. Social & Behavioral Studies	June 2024
Moreno Valley College
